Tejasvi Kolhe *Student at Symbiosis Institute of Technology, Nagpur*

tejasvi.kolhe06@gmail.com 7620182062 TejasviKolhe TejasviKolhe193

Education

B.tech CSE 06/2024 – Present
Symbiosis Institute of Technology, Nagpur Nagpur, India

Technical Skills

Programming languages
Python, C (foundational), SQL (Oracle, SQLite)

Libraries/Frameworks
Pandas, NumPy, matplotlib, scikit-learn, streamlit

Tools
Git, GitHub, VS code, Jupyter Notebook, Anaconda, Google Colab

Concepts
Data Structure and Algorithms (DSA), Computer Networks (CN), Database Management System (DBMS)

Courses

Data Structures and Algorithms using Python - Part 1 10/2025
Infosys Springboard

Machine Learning A-Z 12/2025
UDemy

Introduction to Python Programming (AD141) 04/2025
Red Hat Training

Projects

Expense Tracker
Built a desktop expense tracker to track daily expenses using Python.
- Used Tkinter for the GUI.
- Uses SQLite3 to manage data, and to implement, add, edit, delete, and search functions.
- Used Matplotlib to display spending patterns through pie, bar and line charts.
- Used OOP concepts and organized code across multiple Python files.

AI Travel Iterinary Planner
- Two-Stage AI Agent Architecture: Designed a complex architecture using Llama 3-8B (Groq) to include a "Strategist" agent for query optimization and a "Planner" agent for generating final itineraries.
- Real-Time Data Integration: Utilized real-time web scraping using DuckDuckGo Search API.
- Full-Stack Development: Created a web interface for user interaction using Streamlit.

National Achievements Students Survey Pipeline
- Built a regression + classification pipeline to predict district-level Math performance from English/Language scores, using NAS survey data across 1,404 districts (2017 & 2021).
- Cleaned and engineered features from 24 raw learning-outcome scores, combined them with geographic and survey metadata into a 17-feature model input.
- Compared 6 regression and 7 classification algorithms, cross-validating each to pick the best-performing model instead of settling on the first one that worked.
- SVR hit $R^2 = 0.941$ predicting Math scores; SVM classified districts into Low/Medium/High performance tiers with 89.3% accuracy.

Professional Experience

AI & Machine Learning Intern 11/2025 – 12/2025
Elevatelabs
- Cleaned and preprocessed real-world datasets (missing values, mixed data types) using sklearn pipelines before modeling
- Built a linear regression model to predict housing prices, hitting an R^2 of 0.64, then broke down the coefficients to see which features actually moved the price (area, bathrooms, and number of stories mattered most)
- Ran EDA on a separate dataset to dig into what correlated with the target variable before jumping into modeling
